T 00-02 2 tier paint tray

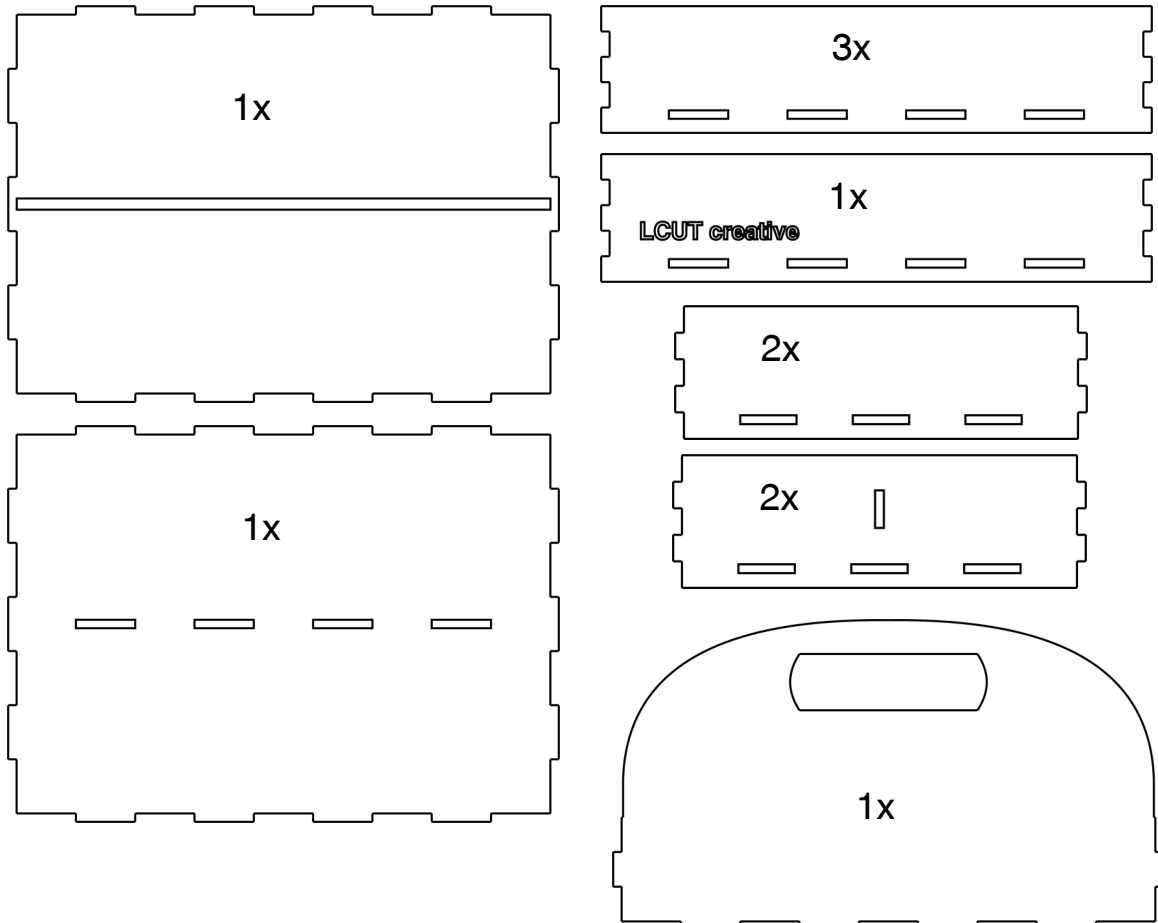

**All drawings are not in scale.
Some proportions on drawings may differ from reality.**

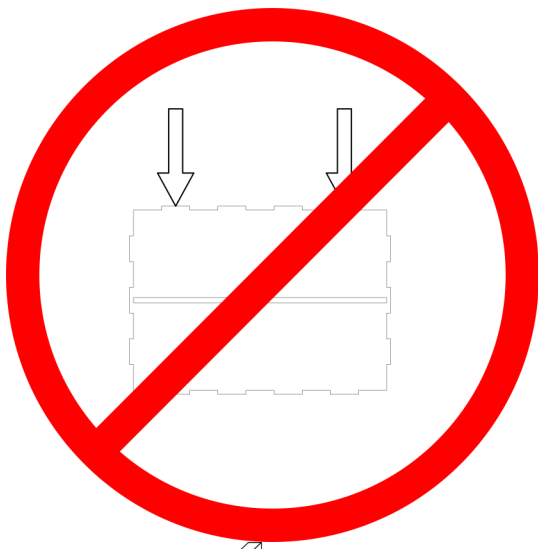

Width: 196mm Depth: 141mm Height: 115mm

! We recommend using good quality, strong, wood glue to assemble this product. It is recommend to sand all of the plywood parts before assembly. If desired the product can be painted with any wood compatible paint or varnish.

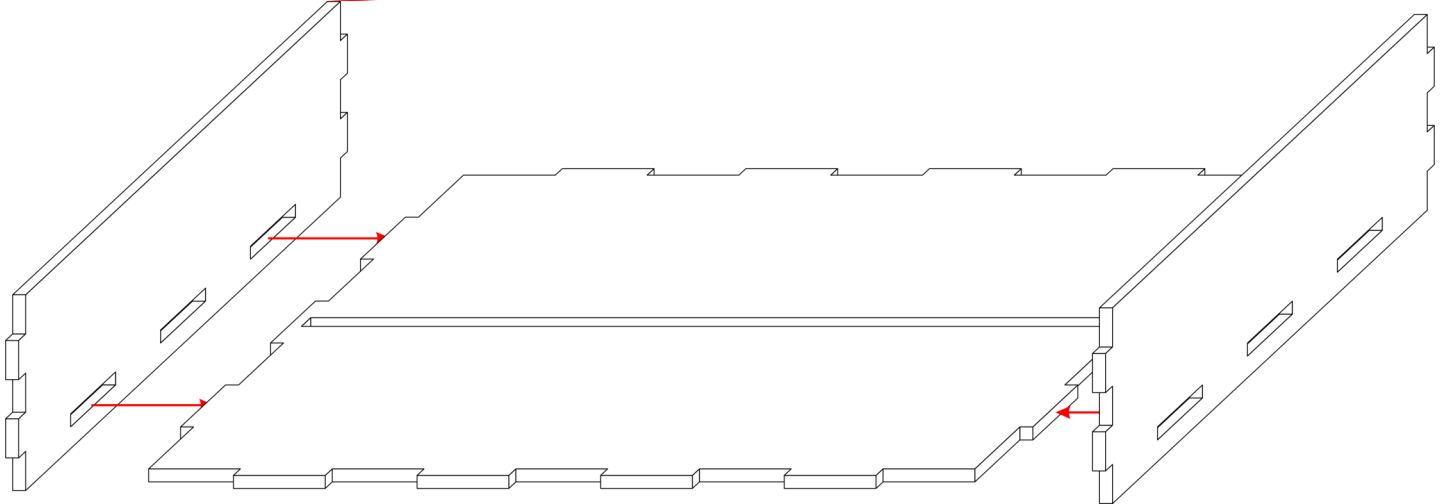

We very strongly recommend use of clamps to hold the parts while glue dries

Parts:

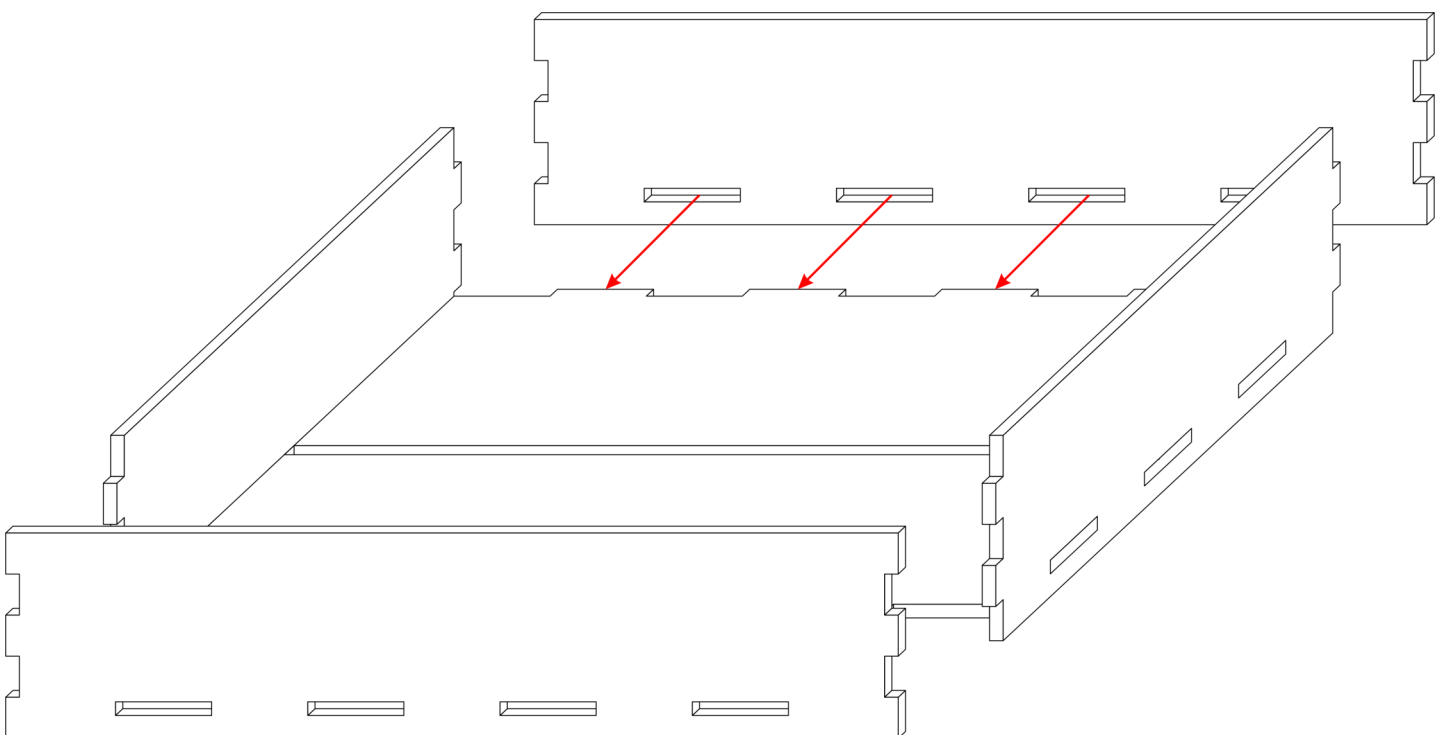

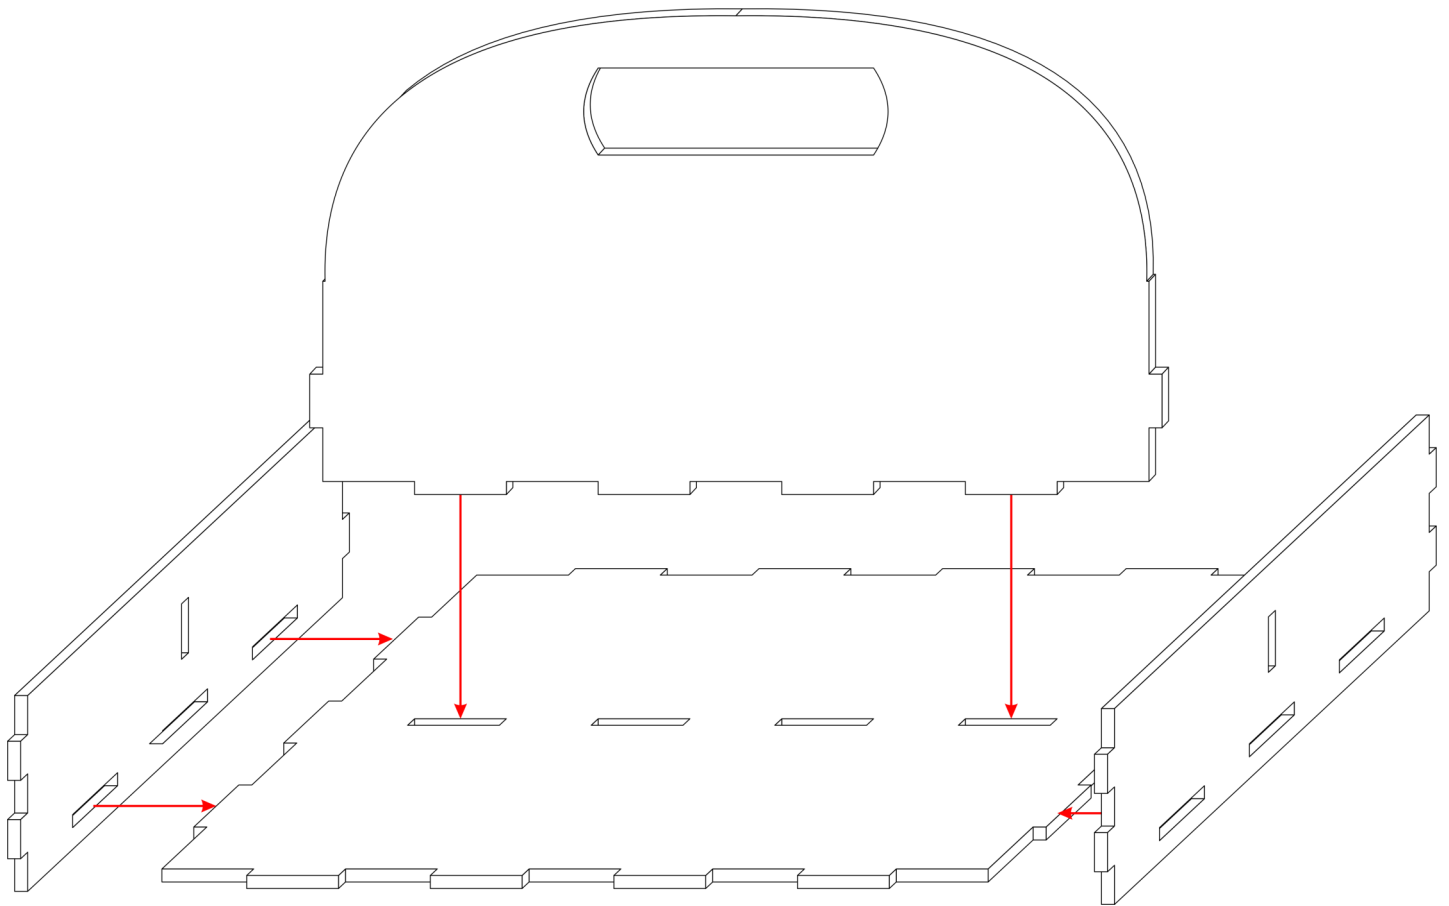

Never put pressure on the part with long slot perpendicular to the slot. It will snap. Always start assembly with the shorter, side, pieces. This will strengthen the part and stop it from snapping when pressure is applied. If it does snap it is still possible to put it together but it makes it harder.

Start assembly of removable tray by gluing the shorter sides first. Clamp and leave to dry. The slots may be tight fitting, use file/sand paper to clean them up and ease assembly. Use plenty of wood glue.

Finish the assembly by putting the longer, front and back, pieces. Clamp and leave to dry

Start the bottom tray by gluing the divider/handle part first. Follow with the side elements. Clamp and leave to dry.

Finish off the bottom tray by gluing the longer, front and back elements. Clamp and leave to dry.
